

BUSINESS ALIGNMENT

Service Overview

Performing an OT Cybersecurity gap analysis comparing current and desired cyber-protected environments represent one side only of necessary business processes and continuity. An alignment to business risk tolerance, continuity and budgets must also become integral to the process. Since 1990, Mangan has helped its customers to meet their objectives whether technical or business driven. OT cybersecurity deserves the same scrutiny to ensure a process that can both grow with your organization while addressing the most critical risks identified.

Mangan's ICSSbD™ processes incorporate the threat and risk model with remediation costs as well as your specific business thresholds for a given time period.

A continuous improvement process links the incremental objectives to achieve a total solution within your business timeframe and spend tolerance.

ICSSbD™ OT Cybersecurity gaps remediation services combine risks, impact on business continuity, and available business budgets to become truly viable and workable.

How We Can Help

- Development of individual gaps estimate remediation cost analysis based on 32+ years systems integration experience.
- Generation of level 1 through 4 evaluation aligning risks criticality, consequence, tolerance, and vulnerabilities with business appetite for cost and continuity risk.
- Recommendations for remediation services that best help to meet your target profile over time.
- Generation of reports that show total remediation as well as staged adjustments based on levels 1 through 4 scenarios.
