

# DOCUMENTATION AND COMPLIANCE

## Service Overview

The internet is filled with ideas and recommendations to protect your OT critical infrastructure. While these may be good places to start, they do not directly represent your company's business needs or objectives. Addressing and planning for your specific legal, regulatory, or internal compliance requirements can seem daunting and overwhelming.

Mangan Cybersecurity can help you to navigate and develop your organizational OT cybersecurity documentation and compliance needs during all stages of your process for planning, best practices, assessments, training, operations, testing and tracking purposes.

A well-documented OT Cybersecurity program throughout its lifecycle from inception through systems retirement will likely pay dividends when needed most. Invest in ICSSbD™ and see how the dividends grow.

## How We Can Help

- Evaluation and assessment of your existing OT Cybersecurity documentation.
- Development of best practices, policies, and planning documents specifically catered to meet your organization needs.
- Review and verification of your facility's compliance as it relates to your regulatory and policy driven requirements.
