

OT CYBERSECURITY READINESS TRAINING

Service Overview

OT Cybersecurity is evolving at a feverish pitch. New threats and risks are identified daily requiring knowledge to succeed that was not previously learned in the IT world. Additionally, special conditions associated with operational technology often mandate that different assessments and remediation paths be taken. It is therefore beneficial to get an OT Cybersecurity Readiness Assessment as well as training specifically addressing current concerns, threats, and approaches.

Mangan's OT Cybersecurity experts are prepared to provide training for your team in a manner that best suits your needs and availability. Topics ranging from the most generic to the most detailed are available. Mangan Cybersecurity training and certification programs are available via multiple platforms including:

- Webinars
- Tabletop Preparedness Exercises
- Lunch and Learns
- One on One
- Classroom Settings
- White Papers

Staying up to date with the most OT cybersecurity topics, regulations, and compliance requirements can make you ready to meet future cybersecurity challenges head on. ICSSbDTM is your readiness resource.

How We Can Help

- Preparation of a personalized assessment of OT Cybersecurity readiness both proactively through planning and reactively should a cyberattack occur.
- Online available resources for training, cyber minutes, and the most recent OT Cyber news.
- Development of a customized training plan that both addresses your concerns and meets your business requirements.
- Mangan ICSSbDTM Certification of existing or customized training programs created to meet stringent OT cybersecurity demands.
- Issuance of individual ICSSbDTM certifications as your team completes supported training sessions and/or programs.
