

PROFILES DEVELOPMENT

Service Overview

Specifying your facility's existing and desired OT cybersecurity performance posture is key to putting together an action plan that addresses your cyber threats and vulnerabilities. Following the NIST Cybersecurity Framework your current and target profiles are generated in light of DHS directives for critical infrastructure in three categories as shown below:

Ultimately, current and target profiles are utilized to develop and assess a gap analysis specifically catered to your organization.

ICSSbD™ produces risk profiles and segregated performance tiers help to identify gaps and the rigor each process will require to achieve your desired OT cybersecurity posture.

How We Can Help

- Segregation of your existing performance posture into the 3 performance evaluation criteria including risk management process, integrated risk management and external participation.
- Target and align external participation groups and collaborations.
- Align cybersecurity risk to organizational policies.
- Development of your Current Profile for OT cybersecurity based on the customized asset inventory and stakeholder interviews.
- Generation of your Target Profile for OT cybersecurity built from interviews, inventories, and your personalized facility appetite for risk.
- Preparation of current and target profiles data for inclusion into the recommendations and implementation strategy for your organization.
